### DETAILED ACTION

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 5, 11, and 15-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hrivnak et al (USPN 4388356) in view of Myers et al (USPN 4239727). In regard to independent claim 15, Hrivnak et al teach all of the claimed limitations (figs 4-8) except fixing the sheet outside a forming portion of a cup-shaped vessel. Myers et al teach thermoforming a thermoplastic sheet that is fixed outside a forming portion of a cup-shaped vessel (figs 1-8). Hrivnak et al and Myers et al are combinable because they are analogous with respect to a thermoforming sheet. Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the fixing of Myers et al in the process of Hrivnak et al in order to ensure proper positioning of the film within the mold apparatus and allow for handling of the film. In regard to claims 5 and 11, such are taught by Hrivnak et al (col 4, lns 1-9; figs 4-8). In regard to claim 16, such is taught by the above combination of Hrivnak et al and Myers et al since Myers et al teaches positioning the a fixing means outside of the mold halves.

3. Applicant's arguments filed 11/28/08 have been fully considered but they are not persuasive. Applicant argues that neither Hrivnak et al nor Myers et al teach drawing a clamped sheet with a plug. This argument is misplaced since the instant claimed

Art Unit: 1791

invention does not claim drawing a clamped sheet. In fact, the claimed invention merely recites drawing a sheet relative to a clamping position. Drawing relative to a clamping position is not the same as drawing a clamped sheet since the former is relative to a position or location on the sheet and the latter is relative to the status/state of the sheet. Since the claimed invention merely recited drawing a sheet relative to a clamping position, such is taught by Hrivnak et al.

Applicant is reminded that a listing of steps in a process claim does not automatically represent a sequence of performance.

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
